Team ID:	SWDIT-2026-5503	Project Name:	Implement Client Script and UI Policy

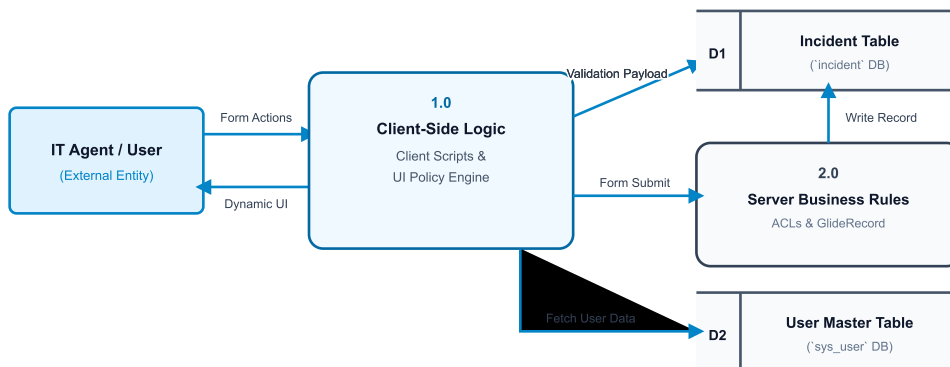

Data Flow Diagrams

A Data Flow Diagram (DFD) depicts the information flows within the ServiceNow Incident Management environment. It shows how user inputs, Client Script triggers, and UI Policies interact with application logic and the underlying persistent storage tables (`incident`, `sys\_user`).

Process Flow Sequence:

1. User opens or edits an Incident Form on the ServiceNow Browser Client Interface.
2. **`onLoad` Client Script** executes immediately, triggering welcome alerts and populating user metadata via ``g_user`` APIs.
3. User alters field inputs (e.g., Impact or Category); **`onChange` Client Scripts** dynamically calculate Priority and filter dependent choices.
4. **UI Policies** evaluate client-side conditions to toggle field requirements (Mandatory, Read-Only, Visible).
5. User submits form; **`onSubmit` Client Script** validates description length and mandatory fields.
6. Validated record payload is committed to ServiceNow Data Engine (``incident`` DB table).

Example: DFD Level 0 (Industry Standard)

User Stories

List of all user stories and acceptance criteria defined for the product design.

User Type	Epic / Module	US No.	User Story / Task	Acceptance Criteria	Priority	Release
End User / Caller	Form Initialization	USN-1	As a user, I want the form to greet me and auto-fill my caller info when opened so that I save time during filing.	Caller field pre-populated with active logged-in user name.	High	Sprint-1
End User / Caller	Field Dependencies	USN-2	As a user, I want subcategories to dynamically update based on Category selection so that invalid combinations are prevented.	Subcategory options refresh instantly on Category change.	Medium	Sprint-1
IT Service Desk Agent	UI Policy Control	USN-3	As an IT agent, I want Assignment Group to become mandatory for High Impact incidents so that critical issues are routed immediately.	Field border turns red and enforces input when Impact = High.	High	Sprint-1
IT Service Desk Agent	Resolution Enforcer	USN-4	As an IT agent, I want Resolution Notes to become visible and mandatory only when State is set to Resolved.	Resolution Notes section appears dynamically upon selecting State = Resolved.	High	Sprint-1
IT Service Desk Agent	Priority Automation	USN-5	As an agent, I want Priority to auto-calculate when Impact or Urgency is changed so that matrix compliance is maintained.	Priority value updates immediately without full page reload.	High	Sprint-2
IT Service Desk Agent	Form Validation	USN-6	As an agent, I want form submission blocked if Description is under 15 characters so that adequate details are recorded.	Alert popup triggers and submission cancels if text < 15 chars.	Medium	Sprint-2
ServiceNow Administrator	List-View Restriction	USN-7	As an admin, I want to block inline cell editing of Priority on list views to enforce form-level business rule checks.	Cell edit displays error message and reverts change.	Medium	Sprint-2
ServiceNow Administrator	Read-Only Guard	USN-8	As an admin, I want Incident Number and Created Date to remain read-only for all users to preserve audit integrity.	Fields are non-editable across form and list view.	Low	Sprint-2
