

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date:		Maximum Marks:	
Team ID:	SWDIT-2026-5503	Project Name:	Implement Client Script and UI Policy

Functional Requirements

Following are the functional requirements of the proposed solution for the Incident Management Module.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Dynamic Form Initialization (`onLoad`)	- Display welcome info banner on opening incident form - Auto-populate logged-in user details in Contact/Caller field - Set default Priority to "4 - Low" for new incident records
FR-2	Field State Automation (UI Policy)	- Make "Assignment Group" mandatory when Impact = "1 - High" - Make "Resolution Notes" visible and mandatory when State = "Resolved" - Set Incident Number and Created Date as Read-Only
FR-3	Real-time Value Dependency (`onChange`)	- Automatically recalculate Priority when Impact or Urgency changes - Clear subcategory choices when Category field is reset - Display warning alert if VIP caller is selected
FR-4	Form Validation (`onSubmit`)	- Validate mandatory minimum description length (>15 chars) - Verify work notes are provided before resolving an incident - Block form submission and alert user if validation fails
FR-5	List-View Control (`onCellEdit`)	- Prevent inline editing of Priority directly from List View - Require opening full record to change incident State to "Closed"

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intuitive user interface with dynamic visual indicators (red borders for mandatory fields) ensuring zero training overhead for IT agents.
NFR-2	Security	Role-based access control (RBAC) ensuring unauthorized users cannot bypass UI policies or modify restricted fields via REST or script.
NFR-3	Reliability	Client-side scripts must handle null/undefined errors gracefully without crashing or blocking browser interaction.
NFR-4	Performance	Client scripts and UI policies must execute within 100ms on form load and field change to prevent UI lag. Use UI policies over scripts where possible.
NFR-5	Availability	Form logic and business rules must achieve 99.9% uptime, fully integrated with ServiceNow's cloud infrastructure.
NFR-6	Scalability	Architecture must seamlessly support high concurrent usage (500+ agents) without degradation in form load time.
